TECHNOZION

INNOVATION BEYOND BOUNDARIES

OCTOBER 30-31

WELCOME TO NITW

Since its founding in 1959 as Regional Engineering College Warangal, NIT Warangal has grown into one of India's foremost technical institutions. The institute boasts a rich legacy of alumni who have made profound contributions to the global engineering sector while scaling new heights in finance, culture, politics, and the arts. Driven by this standard of excellence, the current faculty and student body continually strive to push boundaries and champion a well-rounded approach to development. At this renowned institute, the mastery of foundational engineering is seamlessly woven with a deep appreciation for cultural heritage, shaping the brilliant, multifaceted leaders of tomorrow.

ABOUT TECHNOZION

TECHNOZION embodies the very spirit and pulse of the National Institute of Technology, Warangal. Since its inception in 2006, this annual technical festival has championed innovation, rapidly evolving into South India's most prominent technical symposium. Acting as a vital national launchpad, it empowers the brightest young minds to confidently display their engineering ingenuity. By hosting over 60 elite, highly competitive events, the festival successfully unites aspiring technologists from across the country, challenging them to prove their technical mettle. Expanding in scale, quality, and spectacle with each successive edition, the fest continuously redefines excellence. As we prepare to turn the page to an exciting new era of discovery and competition, brace yourself for the most monumental edition in our history - Technozion '26.

**PROF . BIDYADHAR
SUBUDHI**

As the director of NIT Warangal, I take this opportunity to Invite you to be an integral part of our Technical fest Technozion. TZ is our two-day annual technical festival that aims to provide a platform for students to gather, interact, share and showcase their technical skills. Through this we seek to provide a platform for emerging young talents to display their talent in a plethora of events. Being a part of our festival will bring you in touch with the best minds across the nation and gives you an opportunity to nurture and identify excellence. We look forward to providing you with good brand visibility among the student community. I am very optimistic that with your goodwill and association, Technozion will reach greater heights.

DEAN STUDENT WELFARE'S MESSAGE

 **TECHNOZION'26**

As the Dean Student Welfare of NIT Warangal, I take immense pleasure in inviting you to our annual Technical fest Technozion, where passionate minds unite to innovate. Over the course of two days, talented minds from all over the country come together to showcase their technical skills in various events, workshops, and exhilarating competitions. We provide you with a platform to connect, create, and upskill yourselves by getting hands-on experience with cutting-edge technologies. This fest will not only be a feast for technical enthusiasts but will also ignite a spark of innovation in every mind. We assure you that every event will leave you hungry for more, and we have plenty of innovation to mesmerize you. We are optimistic that Technozion will reach its pinnacle this year with your active participation and contribution

**PROF . K KIRAN
KUMAR**

TECHNOZION'26

SAC PRESIDENT'S MESSAGE

PROF V.VASU

With immense pride that I welcome you to Technozion 2026, the premier technical symposium of the National Institute of Technology, Warangal, and a flagship initiative nurtured by the Student Activity Centre (SAC). Technozion has long stood as a dynamic convergence of innovation, intellect, and practical engineering, providing a platform where the brightest minds from across the country gather to challenge the status quo. This year, our dedicated student organizing committee has curated an exceptional lineup of cutting-edge workshops, high-stakes competitions, and insightful guest lectures designed to bridge the gap between classroom theory and real-world technological solutions. Because SAC remains deeply committed to fostering holistic student development and leadership, I strongly encourage every participant to embrace the competitive spirit, forge meaningful networks, and push the boundaries of their imagination during this festival. I extend my heartfelt gratitude to our faculty and administration for their unwavering support, and I wish everyone an unforgettable, enriching experience as we explore the future of technology together.

SAC VICE PRESIDENT'S MESSAGE

TECHNOZION'26

As the faculty advisor of Technozion'25, it is my absolute honor to invite you to our prestigious annual Technical fest Technozion. Technozion is an amazing fest where over the series of 2 days, students will be exposed to various diverse and informative events where they will be able to develop themselves in terms of both technical knowledge and personality. As we gear up for Technozion' 25, our events, workshops & competitions will be curated to embody the essence of TECHNOZION. We will explore the frontiers of artificial intelligence, delve into the realms of virtual reality, and harness the power of sustainable technology. The goal is not only to showcase the marvels of the present but to inspire the architects of the future. As we delve into TECHNOZION, envision a Technozion that transcends the ordinary, a space where ideas flourish, and innovations take flight. Let this theme be a catalyst for your creativity, an inspiration that propels you to push the boundaries of what you thought was possible.

PROF VENKANNA U

TECHNOZION'26

COMPETITIONS

TECHNOZION'26

EVENT DESCRIPTION

Smash Karts is an intense robotic racing battle where speed, strategy, customization, and combat collide on the track. Teams go head-to-head with custom-built robotic karts, racing to the finish while collecting powerful boosts and using special abilities to disrupt their opponents.

Players must master the perfect balance between speed, defense, attacks, and strategic overtakes to survive the chaos and secure the top position. With multiple karts battling simultaneously, every race becomes a fast-paced test of control, timing, and strategy.

SMASH KARTS

POC

Krishnanarayanan M +91

98460 32569

Kallavi Sree Sathya Sivani

+91 7396292887

RULES & REGULATION

The competition is split into 2 categories:

- People who come with their own cars
 - The participants will be provided with a document having a set of rules and constraints under which they will have to make their car.
 - Based on number of people who register for the competition with their own cars a knockout bracket will be made to determine who is the winner
- People who would like to learn even without their own car
 - Each person can participate in this event only once.
 - An exploded view of the car will be presented at the beginning of each start of a match to teach them about the engineering that went inside the car.
 - the tracking system of the cars will also be explained at the beginning of the event to the people interested in the technology behind it.
 - Round 1: they will be given the C++ code of the microcontroller with errors embedded in them. They will also be provided with the pre requisite knowledge needed to correct the code (i.e. how the function works, how do you input/output data to the pins). Once they are done with correcting the code a supervisor will check if the code is correct and allow them to go to the next round.
 - Round 2: they will be provided with the microcontroller and the sensors in the car. They will be required to connect the sensors to the correct pins of the microcontroller according to the schematic diagram provided. Once they are done connecting a supervisor will check if the connections are correct and allow them to proceed to the next round.
 - Round 3: they will have to race laps around the track. During the race they will get to pickup power ups. These power ups can be used to sabotage others or save themselves from others sabotages. Round 1 and 2 will affect how they will start Round 3, people solving round 1 and 2 fastest will start the race sooner. The person who comes first in this race will win the match.

TECHNOZION'26

EVENT DESCRIPTION

Mechatronics Gala is a flagship Technozion showcase combining autonomous racing, drone piloting, and human-vs-AI gameplay.

Turing Track – Experienced: Teams race self-built autonomous cars on a closed circuit with onboard sensing, computing, and control.

The format includes qualifying time trials followed by head-to-head elimination finals, with prizes and special awards.

Mach Sprint – Intermediate: Participants pilot drones through an indoor obstacle course using provided or personal hardware.

The challenge features qualifying runs, practice sessions, and head-to-head elimination rounds based on speed and penalties.

AI Gambit – Beginner: Participants compete solo against a 6-DOF robotic arm in Chess, Connect Four, or cube-stacking.

An overhead vision system and AI control enable the robot to analyze moves and respond in real time.

Across all three events, the Gala promotes hands-on learning in robotics, perception, planning, and control through safe and engaging challenges.

TECHNOZION'26

EVENT DESCRIPTION

Venture Vortex is an All-India Entrepreneurship Competition focused on strategy, creativity, and business thinking.

Round 1 – Behind the Startup: Teams analyze a startup from a curated list of 50 major Indian companies, studying its journey, pivots, and competitive edge.

Round 2 – Strategy Build: Teams choose between Marketing Strategy or Product Strategy & MVP Building and develop a practical business strategy. Teams focus on target audience, positioning, product decisions, MVPs, and success metrics.

Round 3 – Boardroom Showdown: Finalists pitch their strategy offline at NIT Warangal during Technozion.

Teams face live Q&A and defend their assumptions, decisions, and strategy before a panel.

The competition tests research, strategic thinking, creativity, communication, and problem-solving.

POC

Archit: 9005269875
Sai Vardhan : 9392141239

RULES & REGULATION

1. The competition consists of 3 rounds: Behind the Startup, Strategy Build, and Boardroom Showdown.
2. Round 1 is an online startup teardown where teams analyze an assigned/selected startup from the curated list of 50.
3. Round 2 is an online strategy challenge with teams choosing Marketing Strategy or Product Strategy & MVP Building.
4. Rounds 1 and 2 will be conducted online over approximately one month, with submissions due by the given deadlines.
5. Shortlisted teams advance to Round 3, conducted offline at Technozion, NIT Warangal.
6. Finalists present their Round 2 strategy for 5-10 minutes, followed by approximately 15 minutes of Q&A.
7. All submissions must be original and follow the specified format, deadlines, and team-size requirements.
8. Plagiarism or rule violations may lead to disqualification, and judges' decisions will be final.

TECHNOZION'26

EDGE OLYMPICS

EVENT DESCRIPTION

An EdgeAI-based hardware challenge focused on solving real-world problem statements.

Participants work with limited hardware and computing resources.

They must design and implement an efficient AI-based solution.

Solutions should be optimized for speed, memory, and power consumption.

Participants will face strict resource and hardware constraints.

The challenge emphasizes practical problem-solving and optimization.

The most efficient and effective implementations will stand out.

POC

Ashish : 7660899844

RULES & REGULATION

EVENT DESCRIPTION

IMPACT TANK is a structured student startup challenge taking participants from problem identification through prototype building, market validation, and go-to-market planning, culminating in an offline finale at NIT Warangal with a 30K prize pool. TZ Day consists of the two-day Technozion finale where shortlisted teams first showcase interactive, live demonstrations of their prototypes to visitors and judges at the Impact Expo, followed by a final pitch presentation and Q&A session before an expert panel evaluating their complete solution and market roadmap.

POC

Dhrithi - 6303078358
Sanjana - 8885354347

RULES & REGULATION

1. Teams must register before the specified deadline and remain committed throughout the 5-week challenge.
2. Each team must work on a unique problem and startup idea and submit all required deliverables within the given deadlines.
3. Teams must complete all stages: Ideation, Prototyping, Go-To-Market, Product-Market Fit, and Demo Day.
4. All prototypes/MVPs must be developed by the participating team and should demonstrate the core proposed solution.
5. Teams must conduct genuine user validation through interviews, testing, and feedback collection during the PMF stage.
6. Teams may be eliminated after Week 2 based on problem relevance, innovation, prototype progress, technical feasibility, market potential, GTM clarity, and team commitment.
7. Selected teams must present their final solution and pitch at Demo Day during Technozion.
8. Any form of plagiarism, copied work, fabricated user feedback, or misrepresentation of data will result in disqualification.
9. Decisions of the organizing committee/jury regarding evaluation, shortlisting, and elimination will be final.
10. The organizers reserve the right to modify the schedule, submission deadlines, or event procedures if required.

TECHNOZION'26

EVENT DESCRIPTION

DEFCON 2.0 is a live attack-and-defense cybersecurity competition organized by HAM ARC.

Teams compete against each other in a hands-on cyber battlefield using real machines and vulnerabilities.

Each team must defend its own system while identifying and exploiting weaknesses in opponents' systems.

Participants must balance offensive attacks with strong defensive strategies.

The competition tests skills in vulnerability assessment, exploitation, system security, and incident response.

Teams must continuously adapt as they attack rivals while protecting their own infrastructure.

The event emphasizes practical cybersecurity skills, strategy, teamwork, and quick decision-making.

The team that performs most effectively across both attack and defense emerges as the top contender.

DEFCON

POC

Aaditya Shukla - 9119720950

RULES & REGULATION

1. Teams consist of 1-4 members with one attack workstation and one defended machine.
2. Round 1 is strictly for securing the assigned machine; no attacks are allowed.
3. Teams may attack only opposing teams' defended machines within the official network.
4. Attacking organizers' systems, external networks, scoring systems, or attack workstations is prohibited.
5. DoS attacks, flooding, and intentional disruption are strictly prohibited.
6. Sharing exploits, credentials, or access between teams is not allowed.
7. Initial access, privilege escalation, and full control are automatically detected and scored.
8. Exploiting arena boundaries or the scoring system may result in disqualification.
9. Points are awarded for successful attacks, compromise depth, speed, and effective defense.
10. Final standings are based on the total score after the Attack Round.

TECHNOZION'26

META ARMOR

EVENT DESCRIPTION

Thermal Armor is a competitive thermal-protection-system design challenge.

Teams act as materials and engineering teams designing a thermal shield for a re-entry capsule.

The goal is to develop a lightweight and low-cost protection system.

Teams select materials and design their prototype based on thermal performance.

Participants build and test their shields using a standardized testing setup.

Test results are analyzed to identify weaknesses and improve the design.

Teams redesign and retest their prototypes to optimize performance.

The challenge tests material selection, thermal analysis, engineering, and innovation.

Performance is evaluated based on the effectiveness of the final thermal protection system.

POC

Sathwika - 82473 82929

RULES & REGULATION

- 1) Design — 10 minutes to select materials, plan the layer configuration and allocate the virtual budget.
- 2) Build — 20 minutes to physically construct the thermal protection system.
- 3) Test — each team is tested using the same heat source, payload, distance, starting temperature and exposure time.
- 4) Failure Analysis — teams review their temperature results and identify why their design performed as it did.
- 5) Redesign & Retest — teams make limited improvements and test again under the same conditions.

TECHNOZION'26

EVENT DESCRIPTION

CSES Arcade is a two-day event consisting of a games showcase and an exciting reinforcement learning (RL) hackathon. The event will begin with a Games showcase, where participants can explore and play various games on multiple stations, including two games developed by CSES.

Following the showcase, the hackathon will begin. We will release the source code of the games at 6 PM. Participants will then work on developing and training a reinforcement learning (RL) model capable of beating the game.

The hackathon will be held in online-mode until 9 AM on Day 2, where participants will be required to return to the venue and continue working in-person. The event will conclude with presentations in the evening. Participants will showcase their models and based on their final performances and presentations, the winners will be decided.

CSES ARCADE

POC

Don Chacko - 7356106869
Dhruv Bhatia - 8454042997

RULES & REGULATION

1. The event consists of 3 rounds: Games Showcase, RL Hackathon, and Final Evaluation.
2. Participants must complete each round within the given time and follow the provided instructions.
3. The Games Showcase involves demonstrating RL models through specified games.
4. The RL Hackathon focuses on developing RL-based solutions within given constraints.
5. Participants must submit their final models before the Final Evaluation.
6. Models will be evaluated primarily based on win rate under standardized conditions.
7. Any attempt to manipulate the model, evaluation process, or results will lead to disqualification.
8. Organizers' decisions regarding evaluation, scoring, and rule interpretation will be final.

EVENT DESCRIPTION

1. Build a car powered entirely by chemistry — no batteries, motors, or mechanical brakes.
2. Design a vehicle within 40×30×20 cm using a chemical reaction for propulsion.
3. Engineer a second reaction to stop the car precisely at the target.
4. Once released, the car must run without timers or manual control.
5. The target distance and payload are revealed just one hour before the run.
6. Teams must tune their chemistry on the spot to match the new conditions.
7. Speed is not the goal — precision determines the score.
8. The car stopping closest to the target line wins.

CHEM-E-CAR SHOWDOWN

POC

Parthu Tavva-9490782021

RULES & REGULATION

1. Teams must have 4–5 undergraduate members, with one entry per team.
2. Cars must fit within 40×30×20 cm and use only chemical/electrochemical propulsion.
3. No batteries, combustion engines, compressed gas, open flames, or hazardous chemical byproducts are allowed.
4. Cars must stop through a second chemical reaction, without brakes, electronics, remote triggers, or physical contact.
5. Round 1: Teams get 2 unscored practice attempts to calibrate and test repeatability.
6. Round 2: The target distance is revealed 1 hour before the run; teams get 2 official attempts, with the closer result counting.
7. Score is the absolute distance from the target line; lower score wins, with ties decided by consistency or sudden-death rerun.
8. Safety inspection, gloves and goggles are mandatory; touching the car after release or violating safety rules leads to disqualification.

TECHNOZION'26

EVENT DESCRIPTION

Rube Wars is a team-based engineering challenge that tests creativity, mechanical thinking, teamwork, and problem-solving. Teams of 2–4 members will be given a specific target to accomplish along with a list of 15 available mechanisms.

The challenge is to design and build a working chain-reaction machine that achieves the given target using at least 6 and a maximum of 9 mechanisms from the provided list of 15 mechanisms. Teams will have limited time to plan, build, test, troubleshoot, and refine their machines.

The machine must successfully connect the selected mechanisms into a continuous sequence, where the completion of one mechanism triggers the next, ultimately achieving the given target.

RUBE WARS

POC

Surya Kashyap: 8143602826

Himavi N: 8712803898

RULES & REGULATION

1. The event will consist of a single round.
2. Each team must consist of 2–4 members.
3. This is Fun Competition event.
4. Teams will be given a specific target that their chain-reaction machine must accomplish.
5. A common set of materials will be provided to all teams.
6. Teams will also be provided with a list of 15 mechanisms.
7. Each team must use a minimum of 6 and a maximum of 9 mechanisms from the given list.
8. We will provide materials for the teams from NITW, also they can too bring their own materials if necessary.
9. Teams from other colleges need to bring their own materials.
10. The machine must form a continuous chain reaction, starting from a single initial trigger and ending by successfully achieving the given target.
11. Teams will be given 45-60 minutes to plan, build, test, and refine their machines.
12. During the final evaluation, the chain reaction must be initiated from the designated starting point and should proceed without manual intervention.
13. The use of reusable and resettable materials will be encouraged and may earn additional points.
14. The repeatability of the complete chain reaction will be considered during evaluation. Machines that successfully complete the sequence consistently across multiple attempts will receive higher marks.
15. Any team using fewer than 6 or more than 9 mechanisms from the given list will not be eligible for the final evaluation.
16. The judges' decision regarding target completion, mechanism usage, repeatability, and scoring will be final.

TECHNOZION'26

EVENT DESCRIPTION

Set against the central fountain in front of the Main Building, Jahaaz is the flagship nautical event for Technozion. Custom-engineered remote-controlled boats navigate a dynamic aquatic arena built with floating PVC pipe borders, plywood chicanes, and protective plastic lining. Each boat features an ESP32 microcontroller, a high-torque 380 DC motor, 30A brushed ESC, MG90S servo-driven rudder, and 2S LiPo battery power. Competitors tackle a three-stage challenge: a speed sprint time trial, an obstacle slalom, and a head-to-head elimination final through active fountain sprays, testing embedded hardware design, propulsion efficiency, and precision piloting skills

JAHAAZ

POC

Gowri : 6238770785

RULES & REGULATION

- Team: 3 participants | 1 RC Boat per team
- Navigate the water maze and complete designated checkpoints.
- Solve puzzles and Dynamic QR challenges to unlock the next clues.
- Collect the required electronic components through the challenge.
- Use the collected components to complete the final circuit.
- Decode the final Morse-code message to complete the challenge.
- Scoring: Points are awarded for tasks, puzzles, QR challenges, components, final challenges and time.
- Winner: Team with the highest total valid score.
- Fair Play: No interference, external assistance, QR sharing/tampering or unauthorised shortcuts.
- Safety: Follow all organiser and marshal instructions. Only approved equipment may be used.
- Important: Detailed scoring, technical requirements and event procedures will be explained during the official briefing.

EVENT DESCRIPTION

RoboCannonade is a robotics competition where teams build and operate a motorized launcher to hit targets across an arena.

Each launcher uses a single-shot mechanism to fire table tennis (TT) balls at designated targets. Outsiders get one month to design and build their own launcher using their choice of materials, hardware, and code.

NIT Warangal students get a 1-hour on-spot build sprint using a provided all-in-one kit.

Launchers must support wireless control for pan-tilt aiming and firing.

Control can be through a smartphone app, web dashboard, or remote controller.

Teams implementing autonomous aiming or target tracking using vision or sensors earn bonus points.

The competition tests robotics, mechanical design, control systems, and precision targeting.

ROBOCANNONADE

POC

Subodh Kanbale : 9325809271

Jaykumar Bhairi : 9209518516

RULES & REGULATION

1. External teams of 3-5 must register through Unstop and build a stationary launcher with at least 3 DOF.
2. The robot must fit within 50×50×50 cm at the start and may expand after the run begins.
3. Teams must bring their own table tennis balls and get a fixed number of attempts against randomized targets.
4. No touching, manual reloading, or human/wireless input is allowed after the run starts.
5. Points vary by target distance, with additional bonus points for successful autonomous aiming and firing.
6. Autonomous systems may use any sensors or algorithms, but hardcoded coordinates are prohibited.
7. Early firing or crossing safety lines results in point deductions or disqualification.
8. NIT Warangal teams receive a standardized kit and get 1.5 hours to assemble and program their launcher.
9. Internal teams may not use external hardware or permanently modify kit components; judges' decisions are final.

TECHNOZION'26

BID TO BUILD

EVENT DESCRIPTION

Bid to Build is a hands-on structural challenge designed to test participants' engineering knowledge, strategic thinking, budgeting skills, and construction abilities. Participants will take on the role of contractors and experience the complete process of planning, bidding, designing, and constructing a structure under a fixed budget and a strict time limit.

The challenge begins with participants analyzing the given requirements and developing a suitable construction strategy. They must then bid for the materials and resources required, carefully managing their limited budget while making decisions that balance cost, strength, stability, and efficiency.

POC

Trisha- +91 9515029072
Dharani- +91 7842431303

RULES & REGULATION

The event will be conducted in teams. At the beginning, each team will be provided with a fixed amount of currency. Participants will then take part in a bidding/procurement round, where they must strategically use their money to purchase the materials required for construction. The materials may include ice-cream sticks, kulfi sticks, cardboard, glue dots, paper tape and other available resources.

After purchasing the materials, teams will be given 2 hours to design and construct a structure based on the given requirements. Participants can use their creativity and engineering knowledge to build structures such as a bridge, two-storey building, or another permitted structure.

Once the construction period ends, the completed structures will be subjected to a strength and stability test using a shake table. The performance of each structure will be evaluated based on strength, stability, design, creativity, and effective utilization of the available budget and materials.

The event challenges participants to make smart decisions at every stage—from bidding for materials to designing, building, and finally testing their structure, making it an engaging and practical civil engineering experience.

TECHNOZION'26

DEMONSTATIONS

TECHNOZION'26

VEHICLE DEMONSTRATION

EVENT DESCRIPTION

Vehicle Demonstration, organised by MES powered by the 4 student vehicle development teams (Team Mechaholics, Team Spardhak, Team Mechxhausters and Team Ashvaratha) showcasing their innovative design and prototypes of a quad-bike, an ATV, a Grand Prix formula racing car and a go-kart. The teams will also be explaining the different mechanisms and working of the parts of the vehicles and about future alternative fuel like electricity and hydrogen and touch and feel the vehicles to understand the mechanisms in greater detail.

RULES & REGULATION

Touching the vehicles without the permission of the respective team members is strictly prohibited.

POC

Yash Karve - 7620478818
Vivek Mishra - 9569716840

EVENT DESCRIPTION

Saponify and Aroma Lab are two hands-on, non-competitive chemistry workshops by ChES & IChE Society, running side by side from 10 am to 5 pm in batches of 25 (about 150 participants each). No prior chemistry knowledge is needed, and every participant takes home what they make. In Saponify, participants see a live demo of saponification and how soap removes dirt, compare how different oils affect a bar, then melt, colour, scent and mould their own glycerin soap and test its pH. In Aroma Lab, participants learn the fragrance pyramid of top, middle and base notes, test 15 oils on smelling strips, then blend and bottle their own 10 ml roll-on perfume. Both workshops show how chemical engineering principles such as reactions, volatility and formulation apply to everyday products.

SAPONIFY AND AROMA LAB

POC

Nanda - 9059907340

RULES & REGULATION

1. Both are single-round, non-competitive workshops with no judging or elimination.
2. Sessions run in batches of 25 from 10 AM–5 PM; participants register with a valid fest ID.
3. Report 5 minutes early; latecomers may be shifted, and walk-ins depend on slot availability.
4. A mandatory briefing and demonstration precede each session; follow volunteer instructions throughout.
5. Use only the materials and quantities provided; keep workstations clean.
6. Volunteers handle the hot soap base and cooktop; Aroma Lab participants must use separate droppers and cups.
7. Gloves are mandatory for oils/colourants; report allergies, spills, burns, or irritation immediately.
8. Do not taste, apply, or remove materials; collect soap the same day, and certificates are given on completion.

EVENT DESCRIPTION

Beauty Alchemist: Make Your Own Moisturizer is a hands-on skincare workshop where participants explore the science behind skincare and learn how different ingredients work together. Participants will understand basic formulation principles, experiment with ingredients, and create their own personalized moisturizer under guidance. The workshop combines chemistry, creativity, and practical learning, allowing participants to formulate, create, and take home their own skincare product.

BEAUTY ALCHEMIST:
MAKE YOUR OWN
MOISTURIZER

POC

Mahima Sharma
9116133955

RULES & REGULATION

1. Select: Choose 7-8 ingredients from the given list.
2. Plan: Explain the role of each selected ingredient.
3. Formulate: Prepare the moisturizer using the given method.
4. Innovate: Create a unique name and add sustainable features.
5. Present: Submit and explain your formulation.
6. Evaluate: Judges assess science, creativity, sustainability, and presentation.
7. Winner: Best formulation wins!

TECHNOZION'26

EVENT DESCRIPTION

GLOW WALL is a hands-on activity based on phosphorescence. Participants will use UV light to draw, write, and create patterns on a specially prepared phosphorescent wall. The UV light excites the phosphorescent material, causing the areas exposed to light to glow brightly and gradually fade over time.

Participants can experiment with equations, constellations, wave patterns, symbols, drawings, and their own creative designs, while also observing how light interacts with the material. You can even create temporary silhouettes and shadows by blocking the UV illumination.

The activity combines physics, creativity, and experimentation into one interactive experience—allowing you to see a scientific phenomenon happen directly in front of you.

GLOW WALL

POC

zubair 9989965299
rupesh 7569292868

RULES & REGULATION

Only the UV lights and materials provided by the organisers may be used.

UV lights must be used only on the designated Glow Wall and must not be directed towards another participant's face or eyes.

Designs should remain appropriate for a college event and should not contain offensive or inappropriate content.

TECHNOZION'26

EVENT DESCRIPTION

This demonstration showcases exciting and visually engaging chemistry experiments designed to attract visitors. It includes visible fluorescence using luminol and H_2O_2 , along with colour-changing and disappearing reactions such as the Chameleon Experiment, Elephant Toothpaste, and Blue Bottle Experiment. The activities provide an interactive way for visitors to experience fascinating chemical reactions while learning the science behind them.

FLASH AND
FURIOUS

POC

Mrudula- 9398349207

RULES & REGULATION

Wear goggles and do not go very near to the set up.

TECHNOZION'26

EVENTS

TECHNOZION'26

KBC

EVENT DESCRIPTION

KBC (Kaun Banega Crorepati) is a knowledge quiz event modelled on the iconic TV game show. It tests participants' trivia knowledge, quick thinking, and composure under pressure as they climb through progressively tougher questions on the "Hot Seat" just like the real show, complete with a Quizmaster, lifelines, and rising stakes with every correct answer. It's open to all branches and years; solo participation only. The top three scorers walk away with prizes, making it a high-energy, competitive spin on technical and general knowledge for the whole college.

POC

Karthik - 9705724689

Sahasra - 9392351069

RULES & REGULATION

- Format: Two rounds - Fastest Fingers First, then the Hot Seat.
- Round 1 (Fastest Fingers First): 5 numbered options given per question, to be arranged in the correct order (e.g., planets by distance from the Sun). Participants SMS their 5-digit answer sequence to a designated number; the fastest correct entry wins a shot at the Hot Seat.
- Round 2 (Hot Seat): Standard KBC-style MCQs, one participant at a time vs. the Quizmaster. Difficulty and points increase with each question, under a strict time limit per question.
- Dropping out: Participants can walk away at any point and keep their current score.
- Elimination: A wrong answer eliminates the participant; their score locks at the last safe milestone reached.
- Lifelines: 50:50, Audience Poll, Phone a Friend, Double Dip — one lifeline per question, and each can only be used once.
- Fair play: Any phone or external help outside the lifelines = immediate disqualification.
- Ranking: Decided by highest tier reached → total score → speed (tiebreaker).
- Prizes: Top 3 finishers win prizes.

TECHNOZION'26

EVENT DESCRIPTION

60 Seconds: Chemical Apocalypse is an intense, hands-on simulation where participants act as emergency responders during a sudden chemical plant leak. Following a frantic 60-second resource scramble, teams race against the clock to build functional protective gear, isolate toxic leaks, and manage limited supplies. The event challenges students to apply real-world engineering principles including chemical filtration, airflow design, process control, and industrial safety under extreme pressure.

POC

Bhavya : 8247546302

Harini : 6304106717

RULES & REGULATION

Teams of 2 to 5 participants nominate a single runner to scavenge supplies and solve escalating chemical crisis scenarios using only their limited inventory.

The 60-Second Scramble: At the siren, runners have one minute to dash to a central supply zone. They can carry a maximum of two items per trip (no bags allowed) to build their team's permanent inventory.

Crisis Management (Rounds 1–4): Teams engineer physical prototypes or written solutions to chemical emergencies like acid spills and gas leaks relying strictly on the gear they scavenged.

The Trading Window (Round 5): A strict 60-second open market allows teams to barter excess supplies with rival teams to fill critical gaps in their inventory.

Advanced Scenarios & The Visitor (Rounds 6+): As disasters demand multi-layered solutions, an "External Visitor" arrives offering high-value materials. Teams must analyze the visitor's technical credentials to determine if the trade is genuine or a scam designed to steal their gear.

TECHNOZION'26

EVENT DESCRIPTION

Participants rotate through three stations to create a short musical performance using guitar, drums, and piano sounds. The event focuses on creativity, coordination, rhythm, and technology using motion-controlled instruments.

The Air Guitar uses an Arduino UNO with an MPU6050 sensor, while the synthesizer uses a 555 timer, LDR, push button, and LM386 amplifier. The Air Drum uses motion sensors and an ESP32 to detect movements and trigger corresponding drum sounds.

MUSIC CORNER

POC

Meghana
6301970768

RULES & REGULATION

It is an event conducted to entertain the participants.

TECHNOZION'26

EVENT DESCRIPTION

A multi-station immersive gaming experience where participants use gauntlet-style gloves as physical controllers. Players interact with virtual games through hand movements and gestures.

Games may include drone flying, alien attacks, and other interactive challenges.

Each station offers a unique and engaging virtual experience.

A real-time feedback system enhances immersion during gameplay.

Participants can physically feel feedback when attacking or getting hit by enemies.

The experience combines virtual gaming with interactive physical sensations.

SPACE
WARS

POC

Sarthak : 7357754778

RULES & REGULATION

TECHNOZION'26

EVENT DESCRIPTION

This is a structured, zero-contact 3v3 laser tag tournament played in 5–10 minute rounds inside a temporary arena with fixed barriers and cover points. Teams score through eliminations, quick squad clears, and hidden-object retrievals, with a centralized leaderboard tracking standings. Referees enforce safety and gameplay rules. Obstacles cannot be moved or climbed, and all hits require clear line of sight. Blind firing and shooting through gaps are prohibited, while an anti-camping rule requires players to move after 30 seconds behind the same obstacle. With electronic blasters and wearable sensors, the event involves no projectiles or physical contact, ensuring a safe and controlled experience.

MECH TAG

POC

Sivacharan : 7075008405
Hayath Ahmed : 7416815942

RULES & REGULATION

1. Obstacles are fixed and cannot be moved, rotated, removed, or climbed unless designed for it.
2. Players may use cover, peek from the side/top, and move between obstacles during the round.
3. Hits count only with a clear line of sight; shooting through gaps or materials is prohibited unless specifically designed as cover.
4. Blind shooting around corners without seeing the target is strictly prohibited.
5. Players cannot stay behind the same obstacle for more than 20–30 seconds without moving.
6. Obstacles cannot be pushed toward opponents or used to block their movement.
7. No physical interaction, pushing, unauthorized climbing, or damaging equipment is allowed.

TECHNOZION'26

EVENT DESCRIPTION

SDC Games is a two-day multi-domain competition organized by the Software Development Club for Technozion 2026.

The event combines technology, creativity, problem-solving, strategy, teamwork, and observation.

Participants can compete in AI/ML, Coding, Cyber Security, and Web Development.

Design and PR challenges add creative and non-technical elements to the event.

Day 1 features multiple challenges across different domains and difficulty levels.

Participants earn points based on their performance throughout the challenges.

Top performers advance to Day 2 for immersive cross-domain challenges.

The event encourages innovation, adaptability, collaboration, and practical problem-solving.

POC

Vedant Vinod Kasat -
8976407707

RULES & REGULATION

1. Technical rounds cover AI/ML, Coding, Cyber Security, and Web Development, with participants choosing a different domain for each round.
2. The same technical domain cannot be selected more than once by a participant during Day 1.
3. Technical challenges increase in difficulty, with later challenges being more advanced.
4. Participants must follow the specified reporting times, time limits, submission procedures, and permitted-resource rules.
5. Unauthorized resources, assistance, communication, plagiarism, impersonation, or unfair means may result in disqualification.
6. Day 1 scores determine the participants shortlisted for Day 2 based on the announced qualification criteria.
7. Day 2 features cross-domain challenges that may involve individual or team-based tasks.

TECHNOZION'26

EVENT DESCRIPTION

Business Frenzy is an interactive business simulation focused on product building, trading, market analysis, and pitching.

Teams build a smartphone using feature cards while managing a limited virtual budget.

They select features based on their target customer segment and can trade cards with other teams.

Market shocks and news change technology values, requiring teams to adapt their strategies.

New technologies are introduced through auctions, adding further strategic decisions.

Multiple trading rounds allow teams to modify their products according to market conditions.

Teams finally pitch their product, pricing, features, and market strategy to judges.

The goal is to create a balanced product with strong strategy, pricing, and market fit.

BUSINESS FRENZY

POC

Arushi Pundir -9068944236

Tushar Jain- 9864512346

Anurag Sharma : 9815880722

RULES & REGULATION

- 1.Participants compete in teams, receiving a fixed virtual budget and randomly assigned feature cards.
- 2.Teams must manage their cards and budget to build one final smartphone product.
- 3.Teams select an initial target market and may change it based on market conditions.
- 4.Trading is allowed only during designated rounds, with prices negotiated around organiser-defined reference prices.
- 5.All trades must be mutually agreed upon and verified by the organisers before the round ends.
- 6.Market News may change technology demand, scarcity, or consumer preferences, requiring teams to adapt.
- 7.New technologies may be introduced through timed auctions, with the highest valid bidder winning.
- 8.Teams must follow card limits and may sell or discard unwanted cards during designated periods.
- 9.Before the final pitch, teams must lock their features, target audience, product name, price, and positioning.
- 10.No changes are allowed after lock-in; teams will pitch their product within the given time, followed by a Q&A.

EVENT DESCRIPTION

Forensic Investigation is an immersive crime scene experience where teams step into the role of detectives.

Participants investigate a staged crime scene using physical evidence, suspects, and witness testimonies.

They uncover hidden messages using UV torchlight and invisible ink.

Teams also identify latent fingerprints and examine physical chromatography evidence.

Every clue must be carefully observed, collected, and connected to the case.

Participants use logic and deduction to determine what happened, how it happened, and why.

Teams must submit their final verdict within the given time limit.

The event requires no prior forensic knowledge and focuses on observation, teamwork, and problem-solving.

FORENSIC INVESTIGATION

POC

Karthik Valluri - 7569599808

RULES & REGULATION

1. Single-round crime scene investigation with the story revealed only on the event day.
2. Participants can compete individually or in teams of up to 3 members.
3. The crime scene includes props, suspects, witness testimonies, and physical evidence.
4. Hidden messages can be revealed using UV torchlight, along with latent fingerprint evidence.
5. Chromatography results prepared in advance will be placed inside the crime scene as physical evidence.
6. Teams attend a briefing covering the case, evidence locations, and QR codes linked to evidence.
7. Participants get 15 minutes to investigate and collect evidence, followed by 15 minutes to write their findings.
8. Submissions must explain what happened, how it happened, and why, with winners decided based on evaluation.

TECHNOZION'26

EVENT DESCRIPTION

An interactive AI/ML event covering Computer Vision, Deep Learning, NLP, LLMs, RAG, Prompt Engineering, and AI Agents.

Participants compete in AI gaming, argument evaluation, LLM security, multi-agent orchestration, and action recognition challenges.

Each challenge tests practical AI skills through engaging and competitive tasks.

Scores are based on accuracy, performance, completion time, or challenge objectives.

Individual leaderboards track each challenge, while an overall leaderboard combines normalized scores.

Goodies are awarded to winners of each competitive challenge except Clash of Minds, and the top 3 overall participants.

The event promotes hands-on learning, experimentation, problem-solving, and practical AI application.

AI UNVEILED

POC

Mrinaal Gupta : 6376912671

RULES & REGULATION

1. Register before the event and follow the instructions for each challenge.
2. Each challenge has its own format, time limit, and scoring system.
3. Scores are based on accuracy, performance, time, or predefined criteria.
4. Participants must stay within designated areas and use provided systems only.
5. Motion and action challenges must be performed within the camera area.
6. Clash of Minds follows a half-duplex format with AI-based evaluation.
7. LLM challenges must be completed through the provided interface only.
8. LLM Orchestration teams have 3 members with assigned stages.
9. System, backend, or leaderboard manipulation is strictly prohibited.
10. Ties may use time-based tie-breakers; organizers' decisions are final.

EVENT DESCRIPTION

Warangal Trading Ring 2.0 is a 90-minute financial market simulation.

The event compresses 5 simulated trading days into a single session.

Each participant receives ₹10,00,000 in virtual capital to begin trading.

Participants trade across a basket of 15–20 financial instruments.

The basket includes stocks, Gold, Silver, Crude Oil, and other selected assets.

Market conditions and unexpected events will challenge participants throughout the simulation.

The event tests market understanding, decision-making, and risk management skills.

The objective is to maximize performance through informed and strategic trading decisions.

POC

Jeel: 6355 198 983

Naman: 70168 79968

RULES & REGULATION

Unlike a normal paper-trading competition, participants experience a continuously changing market.

The simulation compresses 5 trading days into 90 minutes.

Each participant starts with ₹10 lakh in virtual capital.

Participants trade across 15–20 different instruments.

The market includes stocks, commodities, and other selected assets.

Unexpected news and market shocks can change conditions throughout the event.

Participants must continuously adapt their trading strategies to changing situations.

The event tests market understanding, decision-making, and risk management.

Success depends on how effectively participants respond when market conditions are uncertain.

At the end of the simulation, the top-performing participant emerges as the winner.

TECHNOZION'26

EVENT DESCRIPTION

1. EcoCity: Build to Last is a sustainability simulation where teams build a resilient city using a fixed budget.
2. During the 45-minute build phase, teams purchase land, housing, agriculture, water, and employment infrastructure.
3. Teams must balance cheap but polluting coal with cleaner renewable sources like wind and solar.
4. Population grows automatically but is limited by the city's weakest resource, such as food, water, housing, or jobs.
5. A rule-based engine simulates the city year-by-year, tracking resources, pollution, and coal reserves.
6. The longest-surviving city wins, up to a maximum 300-year Sustainable horizon.
7. Ties are decided by lowest peak pollution, followed by lowest total spending.
8. The 90-minute event uses a browser-based BYOD platform and concludes with a live simulation reveal.

ECO CITY

POC

Raghav-9343434134
Bhavesh-9849911980

RULES & REGULATION

1. The goal is maximum survival time, not maximum budget spending; a lean, balanced city can win.
2. Teams receive a fixed budget to purchase land, housing, energy, agriculture, and employment infrastructure.
3. Population grows automatically but is limited by the city's most constrained resource.
4. The simulation ends after consecutive resource deficits, excessive pollution, or population reaching zero.
5. The longest-surviving city wins, with survival capped at 300 years.
6. Ties are broken by lowest peak pollution, followed by lowest total spending.
7. Organizers will provide dedicated laptops/devices for participating teams.
8. 0:00–0:15: Briefing, rules, and simulation setup.
9. 0:15–0:45: Teams build their city, manage resources, and submit their final design.
10. Results are revealed immediately after submission, with the final leaderboard and winners announced at the end of the day.

TECHNOZION'26

EVENT DESCRIPTION

1. Sigma-O-Poly is a strategy-driven mathematical board game combining logic, quantitative reasoning, and asset management.
2. Teams of 2 navigate a dynamic board featuring mathematics, computing, calculus, and theoretical concepts.
3. Round 1 – Online Preliminary: Teams compete in a fast-paced math and logic quiz on Unstop.
4. Qualified teams advance to Round 2 – Main Gameplay, where they manage assets, solve challenges, and compete strategically.
5. Performance is measured through cumulative scores, portfolio values, and tactical dominance.
6. Round 3 – Live Finals: The top 16 teams compete onsite at NIT Warangal during Technozion.
7. Finalists battle through the app, testing mathematical optimization and strategic decision-making under pressure.
8. Winners are determined by final asset valuation and tactical dominance, followed by prize distribution.

SIGMA O POLY

POC

Saad : 88091 77186

RULES & REGULATION

- 1.- Open to All: No age or institutional restrictions—school students, college students, and adults can all participate freely.
- 2.- Team Size: Exactly 2 members per team.
- 3.- Round 1 (Unstop Quiz): An online, timed math and logic quiz hosted on Unstop to filter qualifiers.
- 4.- Round 2 (Gameplay Phase): Qualified teams access the digital app to play, manage assets, and build portfolios.
- 5.- Round 3 (Live Finals at NITW): The top 16 teams from Round 2 compete live on-site at NITW during Technozion.
- 6.- Fair Play: Any unauthorized assistance, cheating, or external collusion leads to immediate disqualification.
- 7.- Final Authority: Organizers' and judges' decisions on all game rulings and results are final.

TECHNOZION'26

EVENT DESCRIPTION

ARCADE is an interactive robotics and embedded-systems challenge organized by the Robotics Club.

The event combines algorithm development, simulation, embedded systems, and real-time robotics.

Participants compete through two challenges: AI Air Hockey and Robot Strike.

Teams receive problem statements and develop the required algorithms or control logic.

Participants may validate their solutions through MATLAB-based simulation.

Successful approaches are then implemented or tested on real-time embedded hardware.

The event focuses on converting problem statements into practical robotic solutions.

ARCADE provides hands-on experience in algorithm design, simulation, and robotic deployment.

POC

Vipul - 8118832272
Sai Datta - 9346647634
Garima - 9680686877

RULES & REGULATION

1. ARCADE has two challenges: AI Air Hockey and Robot Strike.
2. Participants develop algorithms based on the given problem and system constraints.
3. Solutions may be tested in MATLAB or the designated simulation environment.
4. AI Air Hockey focuses on puck tracking, prediction, and robotic paddle control.
5. Robot Strike has three rounds: Stationary, Linear Moving, and Dynamic Moving Targets.
6. Final solutions may be tested on real-time robotic or embedded hardware.
7. Performance is judged on accuracy, response time, stability, and task completion.
8. Hardware modification, unauthorized solutions, and rule violations are prohibited.

TECHNOZION'26

EVENT DESCRIPTION

1. Delta Code is a team-based competition testing mathematical reasoning, computational thinking, and Python skills.
2. Each team consists of 2 students and competes in two main rounds.
3. Round 1 – Online Preliminary: A fast-paced Unstop quiz covering Information Theory, Graph Theory, Probability, Statistics, Linear Algebra, and Number Theory.
4. The round evaluates mathematical understanding, logical reasoning, and Python-based problem-solving.
5. Round 2 – Problem-Solving Challenge: Teams receive a problem based on their strongest Round 1 domain.
6. Teams solve it using Python and relevant libraries such as NumPy, SciPy, SymPy, and Matplotlib.
7. Solutions are evaluated on mathematical reasoning, correctness, analysis, and presentation through an online PPT/demo.
8. Selected winners will present their solutions, receive prizes and certificates at NIT Warangal, with no additional competitive round.

DELTA CODE

POC

Akash : 94530 76374

RULES & REGULATION

1. Participants must complete registration and submit all required work within the announced deadlines.
2. Round 1 will be conducted online through Unstop.
3. Round 2 solutions must be implemented in Python, using relevant libraries such as NumPy, SciPy, SymPy, and Matplotlib.
4. Teams must submit their source code, supporting files, and results within the specified deadline.
5. Teams must present their mathematical approach, implementation, analysis, and results through an online PPT/demo.
6. Evaluation will consider mathematical reasoning, implementation correctness, analysis, and presentation quality.
7. Plagiarism, copied work, impersonation, or other unfair means may result in disqualification.
8. Organizers' and judges' decisions regarding evaluation, qualification, and winners will be final.
9. Selected winners will be invited to NIT Warangal for offline presentation and prize distribution; this will not be an additional competitive round.

EVENT DESCRIPTION

MetaMagic brings Metallurgical & Materials Engineering into an engaging, hands-on experience.

Teams move through themed stations featuring different material phenomena.

Participants observe demonstrations and identify materials based on their properties.

Each station includes simple reasoning and observation-based challenges.

Teams explore how material structure influences its properties and applications.

A dedicated microstructure round tests their ability to recognize material structures.

The event combines visual learning, practical observation, and analytical thinking.

Both MME and non-MME students can participate without requiring advanced prior knowledge.

MetaMagic makes materials science interactive, accessible, and competitive.

METAMAGIC

POC

Karthikeya : 63013 69387

RULES & REGULATION

1. Participants explore a variety of smart materials through hands-on activities.
2. Each student gets direct exposure to the materials and their unique properties.
3. They observe how materials respond to different conditions and stimuli.
4. Students interact with demonstrations to understand real-world applications.
5. The experience encourages curiosity, observation, and experimentation.
6. Participants learn the connection between material properties and practical uses.
7. The activity provides an engaging introduction to the world of smart materials.

TECHNOZION'26

EVENT DESCRIPTION

The event combines the competitive dart challenge “Aim for Best” with a fast-paced clue-guessing game.

Participants earn points by answering metallurgy and materials-related questions.

Progressively revealed clues lead participants toward metals, materials, and technical concepts. The clues are inspired by the Marvel × DC theme. Each round tests knowledge, observation, and quick thinking.

Participants must balance accuracy with speed to maximize their scores.

The dart challenge adds a precision-based competitive element to the event.

The clue rounds bring a fun and engaging twist to technical learning.

Together, both challenges create a compact, interactive

AIM FOR
THE BEST

POC

Ishan - 63872 07849

RULES & REGULATION

1) Each team gets 5 darts, with one dart played in each round.

2) The board is divided into labelled metal sectors instead of conventional numerical scoring zones.

Representative event scoring: Steel – 50; Aluminium – 40; Copper – 30; Zinc – 20; Lead – 10.

3) After each dart, the team answers a short question related to materials stuff based on Marvel theme

4) Correct answers add points;
Rule: A dart outside labelled sectors receives no metal score.

TECHNOZION'26

EVENT DESCRIPTION

VR experience where technology meets thrill, fear, and fun. Participants will step into a virtual world filled with unexpected challenges, intense situations, and terrifying surprises designed to deliver a memorable death-scare experience.

From exploring the unknown to surviving sudden scares, every participant will have to keep their nerves under control and react quickly. The event combines immersive VR technology, interactive hardware, and pure adrenaline, giving students a chance to experience technology in a completely different way.

INTO THE VOID

POC

G.Tharun Reddy
7032149888

RULES & REGULATION

Participants will experience the VR game individually within a fixed time limit and must follow the coordinators' instructions. Running, jumping, sudden movements, or misuse of the VR equipment are not allowed. Participants may stop the experience at any time if they feel uncomfortable or unwell. Participants must respect the equipment and other players, and the coordinators' decision will be final.

TECHNOZION'26

HOWERCRAFT

EVENT DESCRIPTION

This event combines learning with practical engineering skills, where teams first attend a workshop to understand the mechanics of hovercrafts and build their own working models. Following the workshop, participants compete by racing their hovercrafts through a series of challenging tracks that test their design, control, and performance. The event provides hands-on exposure to key physics and engineering concepts such as air lift, thrust, reduced friction, and steering control, while encouraging teamwork, creativity, and problem-solving.

POC

Sushanth and Adhithya

RULES & REGULATION

1. Eligibility: Engineering or technically skilled college students.
2. Team Size: 4-5 members per team.
3. Registration: Register with a unique team name.
4. Workshop: Learn hovercraft mechanics and build the model.
5. Kit Rules: Use only the official kit provided.
6. Assembly: Complete final setup and customization on event day.
7. Safety Check: Test the hovercraft and pass the safety inspection.
8. Challenges: Race, obstacle course, water race, and precision landing.
9. Winner: Highest combined score wins Hovercraft Champion.

TECHNOZION'26

EVENT DESCRIPTION

GLOW WALL is a hands-on activity based on phosphorescence. Participants will use UV light to draw, write, and create patterns on a specially prepared phosphorescent wall. The UV light excites the phosphorescent material, causing the areas exposed to light to glow brightly and gradually fade over time.

Participants can experiment with equations, constellations, wave patterns, symbols, drawings, and their own creative designs, while also observing how light interacts with the material. You can even create temporary silhouettes and shadows by blocking the UV illumination.

The activity combines physics, creativity, and experimentation into one interactive experience—allowing you to see a scientific phenomenon happen directly in front of you.

GLOW WALL

POC

zubair 9989965299
rupesh 7569292868

RULES & REGULATION

Only the UV lights and materials provided by the organisers may be used.

UV lights must be used only on the designated Glow Wall and must not be directed towards another participant's face or eyes.

Designs should remain appropriate for a college event and should not contain offensive or inappropriate content.

EVENT DESCRIPTION

The Natural Disaster Resilience Track is a national-level engineering challenge where teams work for a month to develop practical solutions for real-world disaster scenarios. Teams can choose any 2 out of 5 problem statements covering flood protection, earthquake-resistant structures, search-and-rescue rovers, disaster evacuation planning, and an original student-defined innovation. Participants are expected to design, build or simulate, test, and validate their solutions using engineering principles. Each team must submit a short technical report, development log, and 3-minute presentation showcasing their approach and results. The competition rewards technical depth, innovation, validation, and real-world impact, with prizes of ₹7,000 for first place and ₹3,500 for second place.

NATURAL DISASTER RESILIENCE TRACK

POC

Royce Fran - 95811 82664

RULES & REGULATION

Any team may enter up to two of the five problem statements, and each is judged independently.

Per challenge, submit a Design Report (max 5 pages), an Engineering Development Log (Excel), and CAD files with an assembly drawing. PS-04 submits source code and the simulation model instead of CAD.

Each team gives a 3-minute technical presentation before testing.

Single live round per challenge. PS-01 is a 10-minute submersion test, PS-03 is a timed obstacle course, and PS-02, PS-04 and PS-05 are evaluated on analysis and presentation.

TECHNOZION'26

DECONSTRUCT AI

POC

Siddharth : 9076606330

EVENT DESCRIPTION

Deconstruct AI is a three-round competition that challenges participants to use creativity, logical reasoning, and AI/ML skills to solve increasingly complex problems. The event includes AI image generation and prompt engineering, reverse engineering, mathematical logic, and research-based implementation. In Round 1 – Prompt to Pixel, teams recreate a reference image using AI tools and prompts. In Round 2 – The Black Box Challenge, teams reverse-engineer mathematical or logical rules from given input-output examples. In Round 3 – Research to Reality, teams study a research paper and implement its proposed AI/ML solution or a working proof of concept. The competition aims to bridge AI research and practical implementation while encouraging critical thinking, experimentation, and innovation.

RULES & REGULATION

- 1.Registration: Teams register as per the rules.
- 2.Round 1: Recreate images using AI prompts.
- 3.Round 2: Decode hidden mathematical/logical rules.
- 4.Round 3: Implement a research-based AI/ML solution.
- 5.Evaluation: Judged on accuracy, innovation, and technical skills.
- 6.Results: Winners are announced based on final scores.

TECHNOZION'26

SHARK TANK 3.0

EVENT DESCRIPTION

Shark Tank 3.0 is an innovation-driven competition that encourages participants to identify real-world problems and develop practical, technology-based solutions. Teams are expected to research their chosen problem, analyse its causes, and propose an innovative and feasible solution. A key aspect of the event is the development of a functional prototype that demonstrates the practicality and real-world application of the idea. In the final round, participants pitch their solutions and prototypes before a jury panel, which evaluates them based on innovation, technical execution, functionality, feasibility, scalability, impact, and presentation skills. The event aims to promote research, innovation, entrepreneurship, and hands-on problem-solving among students.

POC

Munawar : 9100658648

RULES & REGULATION

- 1.Registration
- 2.Problem Statement Selection
- 3.Research and Problem Analysis
- 4.Solution Ideation and Design
- 5.Working Functional Prototype Development
- 6.FinalPresentation and Prototype Demonstration
- 7.Jury Evaluation and Q&A
- 8.Results Announcement and Prize Distribution
